BACKEND DEVELOPER JR (AI-Assisted)

PROFILE

I specialize in deploying backend software ready for production in the cloud, using containers and robust security practices. I optimize development times using AI as a copilot, always maintaining critical review, best practices, and full control over code quality and security.

TECHNICAL SKILLS

Backend: Node.js, Express, REST API design, routers, middlewares, error handling, data validation (Joi/Zod), authentication and authorization (JWT, bcrypt), RBAC (roles/permissions), MVC architecture

Databases: PostgreSQL, SQL, Sequelize ORM, N-to-N relationships, CRUD, transactions, familiarity with docker-compose, MySQL, SQL Server

DevOps / Tools: Git, GitHub, GitHub Actions (automated CI/CD for tests and deployment), Docker, DigitalOcean (Droplets), Postman, VS Code

Testing & Quality: Vitest (basic unit testing), Playwright (basic end-to-end), Lighthouse audits, basic accessibility (ARIA)

AI-Assisted Development: Refactoring and debugging accelerated by AI, always with manual review and testing. Use of Copilot/GPT as technical support tool and iterative prompting with manual validation and testing.

HIGHLIGHTED PROJECTS

Corporate CRUD – Users, Roles, and Permissions (RBAC) (In development 80%)

Live: <http://138.68.63.96/> **Repo:** github.com/cristianbedoya64/crud-users-ia

Stack: Node.js (Express), PostgreSQL, SQL, Docker, DigitalOcean

- Design and implementation of REST API with Express (routers, middlewares, validations).
- Secure authentication with JWT and password hashing using bcrypt.
- RBAC access control (N-to-N modeling in PostgreSQL and SQL).
- Dockerization, familiarity with docker-compose, and deployment on DigitalOcean.
- Refactoring and debugging accelerated by AI, always with manual review and testing.

Professional Web Portfolio (PWA)

Live: cristianbedoya64.github.io/portafolio-web

Repo: <https://github.com/cristianbedoya64/portafolio-web>

- Developed with React/Vite.
- CI/CD pipeline with GitHub Actions.
- Performance, accessibility, and SEO optimization.

EXPERIENCE (PERSONAL PROJECTS)

Backend Developer Jr – Personal Projects | 2024 – 2025

- Development of backend solutions focused on security, quality, and best practices.
- Use of AI as a technical copilot to accelerate development and debugging.
- Agile methodologies applied to individual projects.

EDUCATION

Systems Engineering (9th semester – virtual) — Universidad Santiago de Cali

LANGUAGES

Spanish: Native | English: A2 (technical reading)

AVAILABILITY

Immediate – Remote · Hybrid · On-site (willing to relocate nationwide)
